**VISA grant for ISCI**

The VISA cultural funding programme provided ISCI with an 1 million krona grant.

[click to enlarge](#)

This amount is going to be the cornerstone of a new ISCI-project which will cover the reading of all published material regarding spinal cord injuries. The aim of the project is to review the material in respect to finding and combining scientific knowledge which can be used for progress in this field.

We want to use this opportunity and thank VISA for the goodwill regarding our work.

The idea behind this project is the same as was during World War II when the military powers established a scientific commission with the function to read everything published in the field of bacteriology. In this project information was found and put into action which turned out to be the beginning of the use of penicillin.
